

West Sacramento building permits, September 28–October 4, 2026

Public notice. West Sacramento’s public permit map service lists 151 building permits with a status date from September 28, 2026, through October 4, 2026. This file has no separate issued-date field, so the count uses status date. The newest status date in that set is October 4, 2026.

Of those 151 records, OTC leads with 93 rows, followed by Residential (30), Fire (13), Commercial (11), Multi Family (2), and Sign (2). Those groups are 151 of the 151 — the full set.

OTC (over-the-counter) permits are the majority — about 62 percent of the week. That usually means smaller, faster clearances: the kind of work cities process without a long plan-check queue. Residential (30) and Commercial (11) are the next substantive buckets; Fire (13) is a meaningful life-safety slice that readers should not skim past.

Two multi-family rows and two sign permits are small but specific. Multi-family tags point to apartment or stacked-housing work; sign permits track storefront and site identification. Neither is invented geography — both are type labels on the city’s public layer.

West Sacramento sits across the Sacramento River in Yolo County and anchors the /ca/yolo hub on Notice Nearby. A 151-row status-date week with a heavy OTC mix says the city’s permit counter was clearing a lot of smaller jobs while still moving residential, fire, and commercial files.

Because this pull uses status date rather than a separate issued-date field, treat the window as status activity on the layer, not a claim about a different date column the file does not publish. Check the city’s own copy before you rely on any one row.

Status-date counting is a data-honesty choice: the city’s public layer exposes StatusDate, not a separate IssuedDate field in this service. Readers comparing West Sacramento to Roseville should remember Roseville’s portal used issued_date while West Sacramento’s count tracks status movement.

OTC volume this high usually means homeowners and small contractors are clearing quick work — water heaters, minor electrical, small building counter jobs — while Fire and Commercial rows mark the slower, more consequential files.

What the count covers

This notice uses West Sacramento’s building_permits FeatureServer for StatusDate values in the stated window. Type groups were OTC (93), Residential (30), Fire (13), Commercial (11), Multi Family (2), and Sign (2).

It is a citywide West Sacramento count. It does not list a street address, a permit number, or a contractor on this page.

OTC majority and fire rows

OTC dominance is the headline mix. Fire permits at 13 rows are roughly 9 percent of the week — enough to notice as sprinkler, alarm, or related life-safety clearances moving alongside ordinary building work.

Residential (30) plus commercial (11) give a 30-to-11 housing-versus-business building split among the non-OTC, non-fire, non-sign, non-multifamily remainder when read as the named building classes on the layer.

Why it matters in Yolo County

West Sacramento is Yolo County's riverfront growth city. Permit status volume is a weekly open signal for neighbors watching warehouse, residential, and downtown corridors without a thick local paper.

Compare OTC share and fire counts to later Filed Nearby pulls to see whether smaller counter work stays dominant or residential and commercial plan-check rows rise.

Status date caveat

If you are building a spreadsheet of California cities, tag West Sacramento's metric as status-date activity for this service. Do not silently mix it with issued-date cities.

Fire permits (13) deserve a second look from anyone tracking life-safety upgrades. They are not OTC noise.

How to read this notice

Start with the week total (151), remember the date field is status date, then read OTC → Residential → Fire → Commercial. Newest status date is October 4, 2026.
