

Lynchburg building permits, September 28–October 4, 2026

Public notice. Lynchburg’s public permit map service lists 27 permits with a start date from September 28, 2026, through October 4, 2026. This file counts by start date, so some of these may not be issued permits yet.

Type labels on the layer include BUILDING (9), ELECTRICAL RESIDENTIAL EZPERMIT (6), RIGHT OF WAY (4), PLUMBING RESIDENTIAL EZPERMIT (3), ELECTRICAL (2), SIGN (1). Subtypes that are filled in lean renovation, right-of-way maintenance-of-traffic plans, repairs, and additions.

Neighborhood tags that appear on the week’s rows include WARDS RD COMMERCIAL CORRIDOR (2), WIGGINGTON RD - WEST (2), FAIRVIEW HEIGHTS (2), 5TH STREET CORRIDOR (1), CAMPBELL AVE COMMERCIAL (1), TIMBERLAKE COMMERCIAL CORRIDOR (1). Status values: APPROVED (23), FINALED (4).

Where the layer carried a job value, the summed figure across those 27 rows was \$623,010. Treat that as what the open file reported — not an appraisal of every job site in the city.

Lynchburg is an independent Virginia city. Permit traffic here is a local signal for housing repairs, trade permits, and corridor work along Wards Road, Campbell Avenue, and related commercial strips named on the city’s own neighborhood field.

What the count covers

The city’s open data layer supplies type, subtype, status, neighborhood, and job value. This notice aggregates those fields for the window and does not print street addresses.

Confirm any single row on Lynchburg’s own GIS copy before you rely on it.

Why it matters

On the /va/lynchburg hub, weekly permit totals help residents see whether renovations or new work are leading. A week heavy on electrical and plumbing EZ permits usually means household systems work, not skyline projects.

Quiet byline: Building permits · sourced with Filed Nearby.

Independent-city context

Lynchburg files its own permits as an independent Virginia city. That means this notice is not a county digests of Amherst or Campbell work — it is Lynchburg’s layer only.

Start-date counting can include jobs that are approved on paper before crews mobilize. If you need “hammers up” certainty, re-check status on the city’s GIS a few days later.

How neighbors use the file

Trade EZ permits (electrical, plumbing, mechanical) often cluster when households replace systems. Building renovations and additions are the heavier construction signal. Right-of-way rows flag traffic-control plans for work in the public street.

Neighborhood corridor names on the layer — Wards Road, Campbell Avenue, Timberlake, and others — are the city's geography labels. They are not street-by-street address lists.

How to read this notice

Start with the 27-count and the start-date caveat. Then skim type mix and neighborhood tags. Job-value sums are optional context when the city publishes them.
